

Robo Pirate's: WE Smart Lab!

Come Discover the Excitement in Our STEAM Labs!

- Rest assured, our curriculum is thoughtfully designed and completely aligned with the latest National Education Policy (NEP) and National Curriculum Framework (NCF) guidelines.
- You'll learn alongside our experienced and passionate educators who genuinely care about each student's journey and success.
- We believe in a flexible learning journey that's tailored to help every student discover and unlock their unique talents.

Our Journey: From a College Dream to Empowering Young Minds

2018: The Big Idea Takes Root!

1

- It all started in a college robotics club, where we truly experienced the magic of learning through doing.

2020: A Vision for Education!

3

- We officially registered our company, driven by a simple thought: if we had access to this technology and knowledge earlier, robotics would feel as natural as any other subject back in school. This inspired us to create fun electronics and robotics kits for schools and host engaging workshops.

2022: Listening to Our Schools!

5

- Schools told us they needed comprehensive, grade-specific solutions. We responded by developing detailed curricula and custom kits tailored for every grade level.

2024: Growing Our Impact with Tech!

7

- We expanded our reach to 19 schools with our DIY kits and curriculum. To support even more students, we also developed new software and simulators, allowing learning to continue beyond the classroom.

2019: Solving a Practical Problem!

2

- When we struggled to find robotics parts, it taught us our first real-world lesson: how to resourcefully find and share what's needed.

2021: Innovation During Challenging Times!

4

- During COVID-19, we created "LEO," our first product—a programmable car packed with features like IoT (Internet of Things) and ML (Machine Learning). What made LEO special was its ability to be programmed in three different ways, from simple drag-and-drop (like Scratch) to advanced C++, all in one robot.

2023: Reaching Every Child!

6

- Our first project in a remote government school, which lacked robotics teachers, taught us the importance of flexibility. It led us to develop special DIY curricula to ensure every child could learn, even when teacher wasn't available.

2025: Introducing "WE Smart Lab"!

8

- Realizing that teacher training alone wasn't always enough, we launched "WE Smart Lab." This comprehensive solution includes kits, educational books, dedicated full-time teachers, and all the necessary setup to create a vibrant learning environment. Today, we're proud to be collaborating with over 85 schools, offering a blend of labs, kits, or teacher training as needed.

Our deepest desire is to see students not only excel in technology but also master the crucial real-world life skills that empower them for the future.

Our Comprehensive Approach to STEAM Education

Passionate Teachers

Our educators are experts who make learning STEAM exciting and accessible, guiding students every step of the way.

User-Friendly Online Platform

Our digital hub provides easy access to lessons, progress tracking, and connects you to your entire STEAM journey.

Exciting Hands-On Kits!

Build, code, and create with 120+ DIY kits for robotics , coding, AI, ML, IoT and 3D printing. Spark curiosity and creativity!

Seamless Lab Experience

We handle lab setup and operations, allowing students to focus purely on the fun of learning and exploration.

Our little secret? Top-notch STEAM education can be amazing *and* affordable!

Welcome to WE Smart Lab's Tech Adventures!

Ready to explore the amazing world of technology? Our hands-on kits and friendly approach make learning STEAM exciting for every student, from primary to middle school!

Arduino & Electronics Exploration

- Dive into how electronics work, build smart sensors, and learn basic C++ programming.
- Perfect for students in Grades 4-9.

Raspberry Pi: Your Own Mini Computer!

- Understand the fundamentals of computers, start coding with Python, and discover the 'Internet of Things'.
- Designed for students in Grades 6-9.

3D Printing & Creative Design

- Turn your ideas into reality by learning 3D printing and how to prototype your own creations.
- Great for students in Grades 5-9.

Discovering Drone Technology

- Learn the science behind how drones fly and get to program them to follow your commands.
- A fun experience for students in Grades 5-9.

IoT & Sensor Networks: Smart Devices Everywhere!

- Explore how everyday 'smart' devices connect and use 'cloud technology' to share information.
- Engaging for students in Grades 6-9.

Coding Fun for All Ages!

- **Block-based coding:** A great start for Grades 1-3.
- **Python:** Step up your skills in Grades 4-9.
- **JavaScript:** For advanced learners in Grades 7-9.

Your Child's Learning Journey with Us!

Learning is All About Fun and Hands-On Discovery!

- We blend Science, Technology, Engineering, Arts, and Math (STEAM), helping children connect ideas and see how everything fits together.
- It's all about learning by doing, not just memorizing! We focus on helping kids build practical, real-world skills they'll use every day.

A Step-by-Step Tech Adventure for Every Age!

- **Grades 1-5:** Simple tech fun! They'll explore sensor technology, Micro:bit projects, and basic electronics – it's pure discovery!
- **Grades 6-8:** Time to dive deeper into web/mobile development, use Arduino to create cool inventions, and learn 'systems thinking' – understanding how all the parts work together.
- **Grade 9+:** Advanced Raspberry Pi, IoT, drone tech, and exciting deep dives into AI and Python coding. Get ready for some serious innovation!

We keep you updated on your child's progress with a personalized digital report that highlights their real growth, not just grades!

Our Edge Over Others

At Robo Pirate, our comprehensive approach ensures a superior learning experience for every student.

	Curriculum	Support	Lab	DIY kits	Portal
Tinkering Lab Model	Standard curriculum with live sessions	Teacher training and post-sales support	Kit-Only Procedure	80 kits	Basic platforms with live teacher
WE Smart Lab Model	Tailored curriculum	Well trained, full time teacher	Complete STEAM Lab Setup	120+ kits	Tracking integrated platforms

Key Features Setting Us Apart

Tailored STEAM Learning Customized educational paths for individual student needs.	Well-Trained, Full-Time Teachers Expert educators dedicated to guiding and inspiring students.
Complete STEAM Lab Setup Fully equipped labs providing hands-on learning environments.	120+ DIY Kits Extensive range of do-it-yourself kits for practical exploration.

Serving 6 states—shaping futures with innovation and quality!

Our Program: Nurturing Every Child's Potential!

Supporting Our Amazing Teachers!

- We equip teachers with engaging, ready-to-use lesson plans.
- Our tools help track each child's growth, so teachers can celebrate successes and offer personalized support.
- Our team is always here to provide guidance and assistance whenever needed.

Learning That Welcomes Everyone!

- Our hands-on labs are designed with every child in mind, making sure everyone can participate and thrive.
- We foster an inclusive environment where every student feels comfortable and excited to engage.

Where Big Ideas Come to Life!

- Kids tackle real-world challenges, connecting their learning to practical solutions.
- They get to tell their own stories through creative projects, bringing their unique ideas to life.
- We encourage thinking beyond the ordinary, sparking true innovation and imagination.

Building Skills for Tomorrow's World!

- Our special workshops introduce exciting, cutting-edge topics like drones, the Internet of Things (IoT), and 3D printing.
- These experiences help open doors, showing kids all the incredible possibilities and career paths available in the future.

Why Robo Pirate is the Right Choice for Child's Future

At Robo Pirate, we're passionate about preparing kids for tomorrow's world. We believe learning should be an exciting adventure, sparking curiosity and building confidence, not just for school, but for life!

A Complete Learning Ecosystem

- We help set up amazing STEAM labs that are fun and functional.
- Thoughtful, custom learning plans for every child's journey.
- Empowering training for teachers to inspire young minds.
- Reliable, ongoing technical support to ensure smooth learning.

Learning That Truly Connects

- Our curriculum aligns with the latest NEP & NCF guidelines.
- Engaging, hands-on activities that make concepts come alive.
- Fostering essential life skills through practical experience.

Exploring Tomorrow's Technologies, Today

- Dive into cool projects with Arduino & Raspberry Pi.
- Discover the magic of 3D Printing & Drone technology.
- Learn vital IoT, AI, & Coding skills for the digital age.

Quality Education That's Accessible

We're committed to providing high-quality, impactful learning experiences that are affordable for every child and every school.

Let's Connect!

We're excited to partner with you in making learning an amazing adventure for every child.
