STEM program
delivery

65,000+
Students engaged
through hands-on
STEM learning

2 000+
Student projects
completed across
grade levels

Why Schools Choose **WE Smart Lab**

Curriculum

- Grade-wise, curriculum-aligned STEM progression
- Integrated DIY kits, workbooks & LMS

Support

- Dedicated, full-time on-site trainer
- Continuous teacher coordination & safety oversight

Evaluation

- Weekly learning checks & periodic evaluations
- Academic year-aligned progress tracking

DIY kits

- Centralized LMS for tracking & reporting
- Student progress, assessments & documentation

Portal

- Structured kits per grade (shared 1:2)
- Designed for repeatable classroom use

**Serving 6 states— shaping
futures with innovation
and quality!**

creativity**

🔧 **Nurture
dreams**

NEP 2020 aligned | Skill-based education | Experiential learning

Kits

Educational kits curated for students in **grades 1-9**, catering to their understanding levels.

Beginner

1st Masterboard DIY Kit

Engage young learners with **hands-on electronics**, no coding necessary, through **interactive play** and real-world applications!

2nd Micro:bit DIY Kit

Master the basics of **Scratch programming** and see your code come to life through **interactive projects** and tasks!

3rd Solar Explorer Robot Kit

Harness solar power to build and explore with **14 unique, eco-friendly robots**, designed for creative young engineers.

Intermediate

4th Creator Kit: Electronics to 3D Modeling

Begin with **electronics circuits** and evolve to creating and printing your own **3D models**.

5th Mobile App Development with Otto Bot Project

Master mobile **app programming** and culminate your learning by building the Otto Bot as your final project.

6th Arduino Explorer Kit

Engage with **hands-on electronics** using **Arduino Nano** for a comprehensive introduction to circuitry and programming.

7th Leo: The Programmable Robot

Dive into robotics with a **multi-functional coding** robot designed for real-world applications and adaptable learning paths.

8th HTML Coding & Robotic Arm SG90 Project

Master **web development skills** and apply them to building a **functional robotic arm**, blending coding proficiency with practical robotics.

9th Raspberry Pi Explorer Kit

Master **Python programming** and real-world applications using Raspberry Pi in this comprehensive curriculum.

Workshops

Guided workshops that empower a student to build and learn, nurturing curiosity.

Smart Home Automation

Explore the essentials of creating a smart home system, focusing on **IoT technologies** without specific branding.

Drone Building Workshop

Learn to construct and **fly a drone from scratch** in this interactive, engaging workshop perfect for technology enthusiasts.

Telescope Assembly and Stargazing Workshop

Explore the universe and learn the fundamentals of **telescope assembly** and usage in this enlightening workshop.

3D Printing Workshop

Dive into the revolutionary world of 3D printing, learning to **design, print, and finish** 3D models from scratch.

Soldering Skills Workshop

A comprehensive, hands-on learning experience designed to teach **essential soldering** skills for electronic projects.

Hardware Tools Workshop

Master the use of essential tools in a **practical, hands-on** environment, designed to empower participants with the skills needed for **various DIY projects**.

Robotic Arm Building Workshop

Assemble and program a robotic arm using MG995 servo motors, enhancing your robotics and programming skills.
